3. Burndown Chart - Sprint 1

Sprint 1 contained 31 story points. The sharp drop occurred because the sprint was simulated in a short period.

4. Completed Sprint 1 Evidence

The Story details show that the work item belongs to completed Sprint 1.

Description

As a faculty researcher, I want to view allocated, spent, and remaining grant funds over time, so that I can monitor grant utilization.

5. Sprint 2 Report and Burndown Chart

The Sprint 2 report shows that all work items were completed. The Sprint 2 burndown report is also included below.

6. Completed Sprint 2 Evidence

The Task details show that the work item belongs to completed Sprint 2.

The screenshot displays the Jira web interface. The top navigation bar includes a search bar, a '+ Create' button, a 'See plans' button, and an 'Ask Rovo' button. The left sidebar shows navigation options like 'For you', 'Recent', 'Starred', 'Apps', 'Plans', 'Spaces', and 'Filters'. The 'Filters' section is expanded, showing 'Search work items' and various filter categories. The main content area is titled 'All work' and shows a list of work items. The selected work item is 'Log Equipment Procurement Expense' (SCRUM-16), which is in a 'Done' status. The task details panel on the right shows the task's description, subtasks, linked work items, and agents. A tooltip indicates that the task is part of '1 completed sprint' (Sprint 2) which ended on '02 Sept 2026'. The bottom of the screen shows a macOS dock with various application icons.

7. Reflection Answers

1. Did your estimations reflect the actual effort?

Not fully. The story points represented relative complexity, but the sprint was simulated and completed much faster than the planned one-week duration, so the estimates were not tested against real development time.

2. Was your backlog well-prioritized?

Yes. FR-001, FR-002, FR-003 and FR-004 were set to High priority, while FR-005 was set to Medium, matching the Lab 1 requirements table.

3. How did your simulated sprint align with your plan?

The selected work was completed, but the timing did not reflect a real one-week sprint because the work items were moved through To Do, In Progress and Done during a short simulation.

4. What insights did the burndown chart give about your team's capacity?

The Sprint 1 burndown started at 31 story points and dropped to 0 very quickly. This confirms that all planned work was marked complete, but the sharp drop mainly reflects the simulation and is not a realistic measure of sustainable team capacity over a full week.

Submission Check

Included item	Status
